Տվյալներ

Product Performance Analysis

Sales by Fat Content

Low Fat items contribute a higher share of total sales compared to Regular fat items.

Top Performing Categories

1. Fruits - highest sales
2. Snack Foods - strong performance
3. Household items - consistent sales

Seafood and Breakfast items show lowest contribution.

Outlet Location Performance

Tier 3 Outlets

Generate the highest total sales among all location tiers

Tier 2 Outlets

Show moderate sales contribution with steady performance

Tier 1 Outlets

Contribute the lowest sales among the three tiers

Sales performance varies significantly across outlet location tiers, with Tier 3 locations demonstrating strongest market presence.

Outlet Size & Type Analysis

1

Medium Outlets Lead

Medium-sized outlets contribute the highest total sales, followed by small outlets. High-sized outlets contribute the least.

2

Supermarket Type 1 Dominates

Records highest total sales and items sold. Types 2 and 3 show similar but lower performance.

3

Grocery Store Insights

Contribute lower total sales but exhibit higher item visibility compared to other outlet types.

Sales Trend Over Time

Analysis of sales performance based on outlet establishment year reveals important temporal patterns:

1

Early Growth

Gradual increase in sales over initial years

2

Peak Performance

Sales reached maximum around 2018

3

Post-2019 Decline

Notable decrease following peak period

4

Stabilization

Relative stabilization in recent years

Dashboard Features

Interactive Slicers

Filter data by outlet location, size, and item type for customized analysis

Dynamic KPI Cards

Real-time metric updates for instant performance monitoring

Comparative Charts

Multi-dimensional analysis through visual comparisons and tables

Consolidated Layout

Single-page design for comprehensive decision support

Conclusion

This Power BI project delivers structured visual analysis of retail sales data across multiple dimensions including product categories, outlet characteristics, and geographic locations.

The dashboard serves as an effective analytical tool for understanding sales performance using descriptive analytics, providing clear descriptive insights while remaining within the dataset scope
